

AI Resume Evaluation and Ranking

Name: Musharraf Hussain

Seat No: 20252073

Project on Github: [click here](#)

Live Demo: [click here](#)

Introduction & Problem

- **Problem:**

- Companies get hundreds of resumes per job post
- Manual screening is slow and biased

- **Solution:**

- AI agent automatically analyzes and ranks resumes
- Matches resumes to job description
- Highlights top candidates

Practical Applications

- HR departments, recruitment agencies, online job portals
- Saves time and effort
- Improves accuracy
- Reduces hiring bias

Key Components of the Agent

- **Perception:** Reads job description, extracts text from PDF/DOCX
- **State:** Stores vectors, scores, ranked candidates
- **Decision Making:** Computes similarity, ranks candidates
- **Action:** Displays ranking, generates graphs & PDF report
- **Learning (optional):** Future ML-based improvement

Technologies & Demo

Technologies & Demo

The screenshot displays the Visual Studio Code (VS Code) editor interface. The Explorer sidebar on the left shows a project structure with folders like `__pycache__`, `.venv`, `resume`, `static`, `style.css`, `templates`, `index.html`, and `uploads`. The `app.py` file is selected and open in the main editor. The code defines a Flask application with the following components:

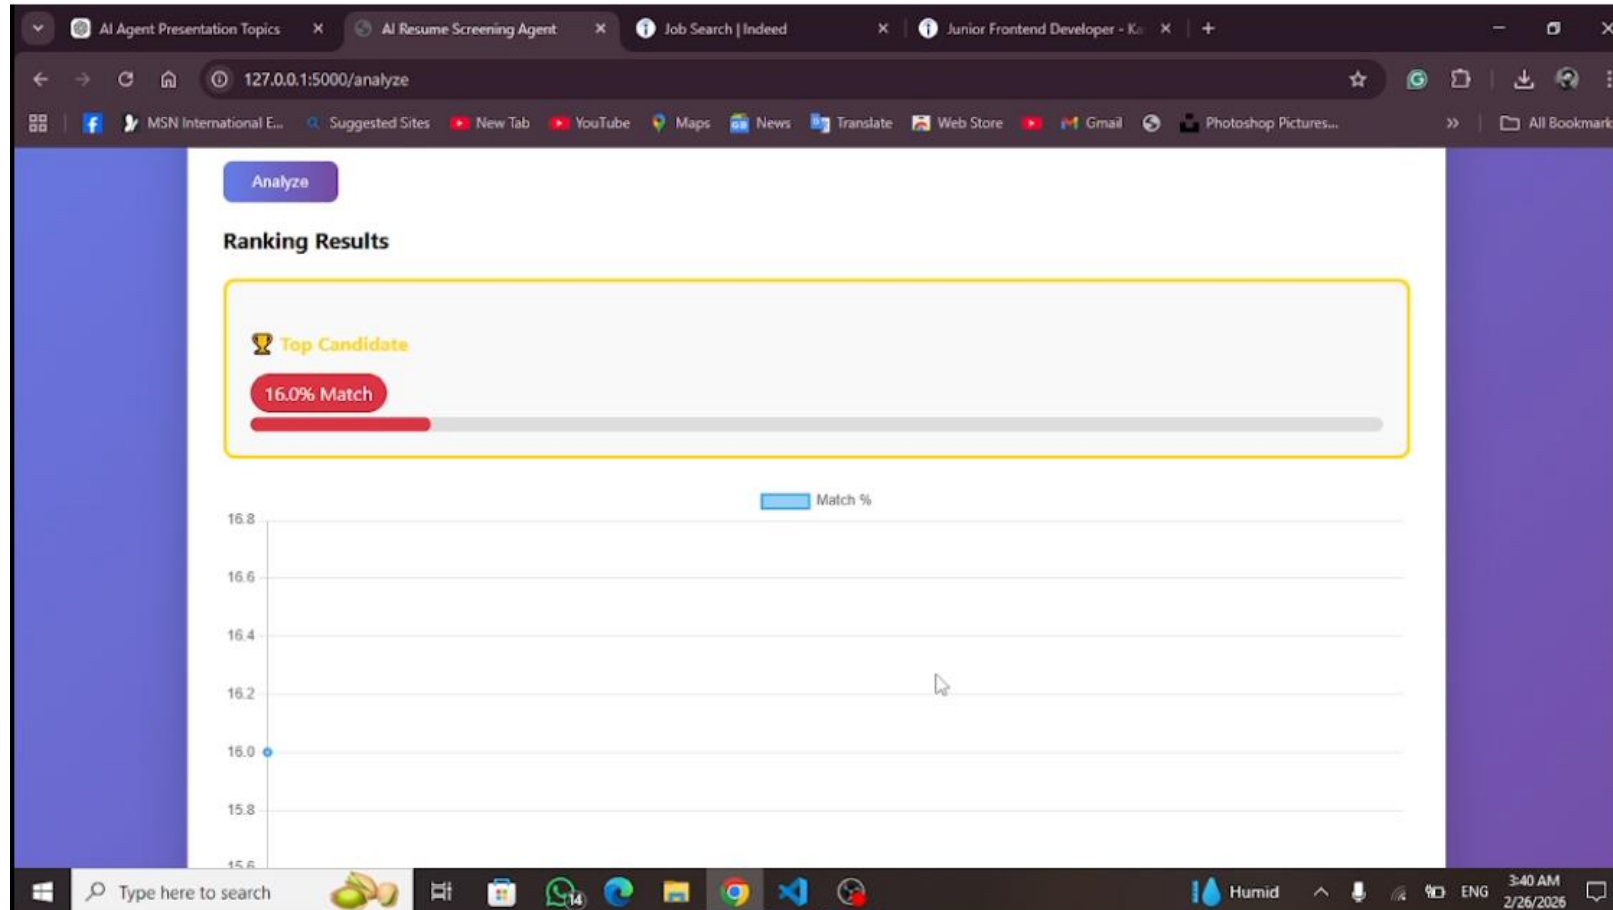

- `read_docx(path)`: A function that reads a DOCX file and returns its content as a string.
- `home()`: A route that renders the `index.html` template.
- `analyze()`: A POST route that processes an uploaded file. It checks if the file is a PDF or a DOCX and appends its content to the `resumes_text` variable.

The terminal at the bottom shows the output of the application, indicating successful file uploads and analysis:

```
127.0.0.1 - - [26/Feb/2026 03:30:22] "GET / HTTP/1.1" 200 -
127.0.0.1 - - [26/Feb/2026 03:30:22] "GET /static/style.css HTTP/1.1" 304 -
127.0.0.1 - - [26/Feb/2026 03:36:48] "POST /analyze HTTP/1.1" 200 -
127.0.0.1 - - [26/Feb/2026 03:36:48] "GET /static/style.css HTTP/1.1" 304 -
127.0.0.1 - - [26/Feb/2026 03:38:27] "GET / HTTP/1.1" 200 -
127.0.0.1 - - [26/Feb/2026 03:38:27] "GET /static/style.css HTTP/1.1" 304 -
```

The status bar at the bottom indicates the file is at line 96, column 24, using UTF-8 encoding with CRLF line endings. The Python environment is `3.10.11 (venv)`.

Technologies& Demo

Conclusion

- Automates resume screening and ranking
- Reduces bias, saves time
- Professional and deployable AI solution
- Future: AI learning and database integration

The End

Best of Luck
